

Short Course - Pitfalls in Inflammatory Dermatoses

Michael Tetzlaff & Jonathan Curry

15th May – 10:15 AM to 13:10 PM

“Cutaneous reactions to targeted and immune checkpoint blockade therapy”. I propose to cover a broad array of inflammatory (and a couple of neoplastic) reactions to targeted therapy and immune checkpoint blockade. This is an emerging area of dermatopathology and I think critical for us as pathologists to recognize these and inform the clinical team of their significance. The good news is that many of the entities we see in the context of immune checkpoint blockade or targeted therapy mimic other processes that facilitate a broader discussion of inflammatory dermatoses. However, we will focus on them through the lens of “...reactions to therapy...”
